

PSU Women in STEM presents:

The True Story of Women in STEM

Portland State University will be holding a panel discussion to dissect the critical issues of identity, gender and diversity within the science, technology, engineering, and math (STEM) fields. PSU faculty and researchers from chemistry, engineering and psychology will share their experiences and offer perspectives that embrace the need for a culture change in STEM. Other topics to be discussed include the exceptional skills and qualifications of women in STEM; the dangers of using labels and stereotypes on women, especially at an early age; and why science and technology fields benefit from more women and minorities. All are welcome.

Thursday, Feb. 15, 12 to 1 p.m.

PSU Native American Student and
Community Center

It's more
than just
a diversity
memo

Moderator: **Karen Marrongelle**, dean of
